

Google has the capability to build an ultra-high speed fiber-optic broadband network that would revolutionize the way a community operates, both at home and in business. With a little effort, Google could bring this capability to the Twin Ports.

What could a fiber-optic connection in every home and business mean for our community? At speeds of one gigabit per second, this network would be faster than any other high speed internet option available. This would change the way our businesses operate and re-shape our connection with one another. Duluth and Superior would be the leaders in an economic revolution, advancing our community into an innovation hub, fit for many new programs and services that require such high-speed networks. We could provide new and improved services in our community that would enhance everyone's way of life.

The key to making this happen in the Twin Ports is you. Our community fits the Google criteria well, and we can convince Google of this fact with the best attraction campaign in the nation. All you need to do is join our efforts by visiting [www.googlewinports.com](http://www.googlewinports.com). This site will take you through steps to complete the form and urge Google to come to Duluth-Superior.

The Twin Ports is currently a forerunner in this contest. So, please lend your support to this campaign. You can vote once a day, but we have just a few weeks until the deadline, so get on the website and enter your vote to make the Twin Ports a Google community!

--A message from Roger Reinert, Minnesota State Representative, District 7B
